

## PADTEC HOLDING S.A.

### PRESS RELEASE

#### **Padtec introduces new services and digital solutions at the Abrint meeting**

Campinas/SP, June 13, 2024 – PADTEC HOLDING S.A. (“Padtec” or “Company”, B3: PDTC3), a leading manufacturer of optical transport systems, is introducing new features in its portfolio of services and digital solutions at the Abrint 2024 National Meeting, an event focused at internet and telecommunications providers, that is being held this week (June 12 through 14) in São Paulo. With more than 20 years of experience in the sector, the Company has more than 40 points of presence in Latin America, through which it provides various operational and maintenance services for the networks of telecommunications operators and internet providers.

One of Padtec's announcements is Smart Workspot, an online platform for managing fieldwork teams (Workforce Management, or WFM) that work in network operations and maintenance. With software developed in-house by Padtec, the platform allows integrated management of teams and service times and can be customized for each operation. It also offers an application for offline access.

Another new offering is InovaTec, an innovation consultancy service dedicated to the telecommunications market that uses methodology tested and verified by Padtec over the years. The consultancy service is provided by a multidisciplinary team, which operates on four pillars: Identification of opportunities, Testing possibilities (with prototype development, fast code, and Lean Agile), Approach to continuous delivery, and Impact assessment, with the implementation of data collection and analysis methods.

The Smart Site solution, a cloud platform aimed at complete remote management of operators and ISP environments (sites) – available as a service model – will also be highlighted at Padtec booth. With intuitive graphical interface, Smart Site allows to manage the entire infrastructure of a single site, providing greater agility and efficiency in identifying and solving day-to-day problems.

In its product line, Padtec is launching coherent pluggable transceivers with a compact size and low power consumption. With a capacity of 400 Gb/s, the new plug-ins can be used both in transponders and in routers from different suppliers available on the market. In addition, the Company will be showing at its booth the first transponder of its new LightPad Max line, a product platform for DWDM (Dense Wavelength Division Multiplexing) networks with very high data transmission capacity. Another highlight is a line of switches and routers from the Taiwanese company UfiSpace, offered by Padtec throughout Latin America.
